

BERTHOUD

ST 10 Front Tank

**The Berthoud ST10 Front Tank from Spray Techniques
Allows the full utilisation of the Tractors capabilities by spreading the load across it's length
maintaining the balance while increasing the payload.**

Why carry front end weights to balance the loaded sprayer on the back.
With the ST 10 Front Tank you are carrying useful ballast that will reduce with use maintaining
the tractors balance while increasing the amount of spray carried keeping in the field longer

- ◆ 1000 litre Poly Tank
- ◆ Hydraulically driven, self priming centrifugal Pump for Fast Fill, Chemical Transfer & Agitating
- ◆ Filter and On/Off valve for controlling Fill, Transfer and Agitating
- ◆ 6 metre Suction Hose c/w none return valve and strainer
- ◆ Chemical Induction Bowl c/w Bowl and Can flush
- ◆ Remote and in cab transfer switch
- ◆ 3 Point linkage
- ◆ Demount Stands
- ◆ Work Lights

A. M. PHILLIP
Spray
Techniques

Self priming Centrifugal Pump
Hydrologically driven from the tractor HYD system
400 lt/min for Filling, Agitating and Transferring

Stainless Steel Chemical Induction Bowl with bowl and can flushing as standard
All valve grouped close for convenient operation

3 point CatII linkage for quick convenient mounting to the front of the tractor.
Jack legs to allow clearance for attaching and removing

Electrically operated transfer valve to allow controlled transfer while pump is in the agitation mode.
Switches in the cab as well on the tank frame for conveyance

The square shape of the tank allows as much visibility as possible keeping the top of the tank low
